Dylan Larrivee

PERSONAL SUMMARY

I am a high-performance Software Engineer who is pivoting from my current technical consulting role and into a full-time developer position. In my professional career, developing custom solutions for marketer's needs has allowed me to work with many types of technologies within the marketing technology industry. I am solutions-driven, have a strong passion for technology and am always looking for opportunities to supplement my learning through personal projects and multiple online learning resources that I am continuously engaging in.

EMPLOYMENT

Technical Services Consultant, Shaw Scott   **August 2018 - Present**
- Build and maintain multiple SaaS application products using hosted on AWS.
- Write custom JavaScript code for use in Google Tag Manager.
- Architect and implement highly dynamic and customized preference center forms for multiple clients using JavaScript and Vue.js framework.
- Manage the technical delivery of ESP onboarding, data integrations, and migration elements of a marketing cloud implementation.
- Provide hands-on, expert-level technical assistance to the client and internal services team.

Senior Campaign Specialist, Lister Digital   **April 2017 – August 2018**
- The US technical lead for 3 accounts simultaneously and coordinated efforts between onshore and offshore efforts.
- Designed data model solutions and provided best practices recommendations based on clients' marketing strategies and requirements.

Expert Services Associate, Oracle   **February 2015 – March 2017**
- Scoped, built and designed brand new event-triggered campaigns for clients on time, on budget and error-free using the Oracle Responsys Interact marketing platform.
- Consult clients on technical and complex projects while also improving efficiency in business requirements and processes.

TECHNICAL EXPERIENCE

Professional
- Work daily with a range of web-related technologies including HTML, CSS, Vue, JavaScript, Node.js, REST, JSON, and XML.
- Writing code in dynamic programming languages such as Freemarker and Python.
- Responsible for writing SQL queries within the Oracle Responsys marketing software as well and in the PostgreSQL relational database environment.
- Building and maintaining web applications and ETL processes in the AWS environment using S3, EC2, ECS with Docker containers, ELB, RDS (PostgreSQL), CloudWatch and Route 53.
- Git and version control.

Personal
- **Node Media Server (2020):** PostgreSQL, Vue.js, JavaScript, AWS, Rest API. Client and server app built with Node.js that allows users to stream files from their home computer when logged in to the site and pulls in additional movie details from a movie database API.
- **Responsys API Integration Apps (2019):** Node.js, PostgreSQL, Vue.js, AWS, Python. Multiple applications that work on top of the Responsys API to provide additional functionality not available in the platform.
